Autonomous Agent Architecture Summary

Created by J.A.R.V.I.S. Autonomous AI Engine • 2026-10-18 03:25:04

Autonomous Agent Architecture Summary

This document outlines the architecture of the autonomous agent, J.A.R.V.I.S.

Capabilities:
* **Calculation:** Performs mathematical operations using the built-in calculator.
* **Email Composition:** Drafts professional emails with specified recipients, subjects, and bodies.
* **Web Browsing:** Searches the web, streams content from platforms like YouTube and Netflix, and facilitates bookings for restaurants, movies, and flights.
* **Software Management:** Downloads and installs software tools like web browsers and development environments.
* **Document Generation:** Creates PDF documents with specified titles and content.
* **Image Generation:** Generates images based on textual descriptions.
* **3D Modeling:** Creates 3D models in Blender using Python scripts.
* **Application Control:** Launches and focuses desktop applications.

System Architecture:
* **Operating System:** Windows 11
* **Core Engine:** J.A.R.V.I.S. - Autonomous Computer-Use Engine
* **Desktop Integration:** Controls real desktop applications, browsers, Blender 3D, and OS UI tools.

User Interaction:
* **Voice Commands:** J.A.R.V.I.S. understands natural language commands.
* **JSON Output:** Provides structured JSON responses for programmatic interaction.

Future Development:
* **Enhanced Natural Language Understanding:** Improve comprehension of complex user requests.
* **Contextual Awareness:** Remember past interactions and user preferences.
* **Integration with External APIs:** Expand capabilities by connecting with third-party services.
